

How to Board a Beaver to the Proper Size

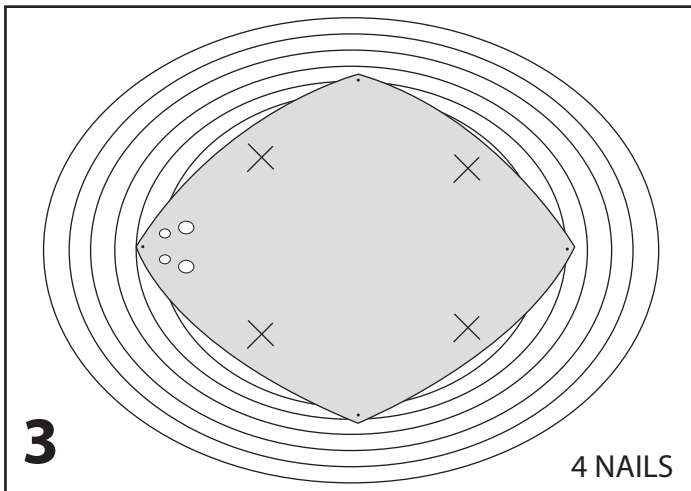

1

Fold the beaver pelt lengthwise on the board. Center the pelt within the size rings and pull out.

2

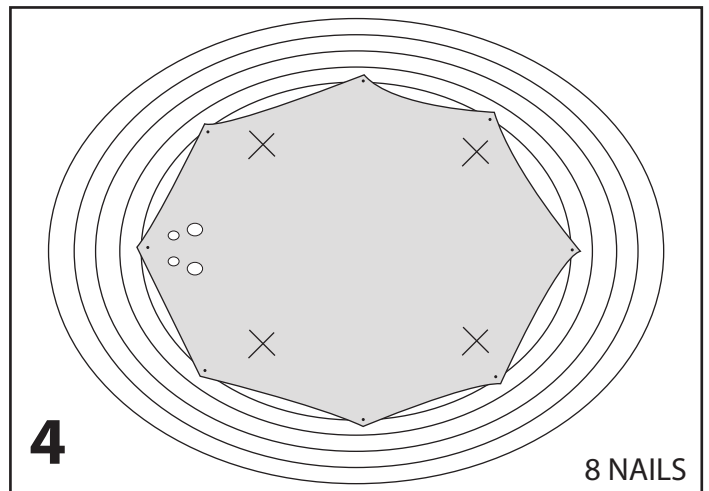

Release the pelt and allow it to return to its natural length, then choose the correct sizing line.

3

4 NAILS

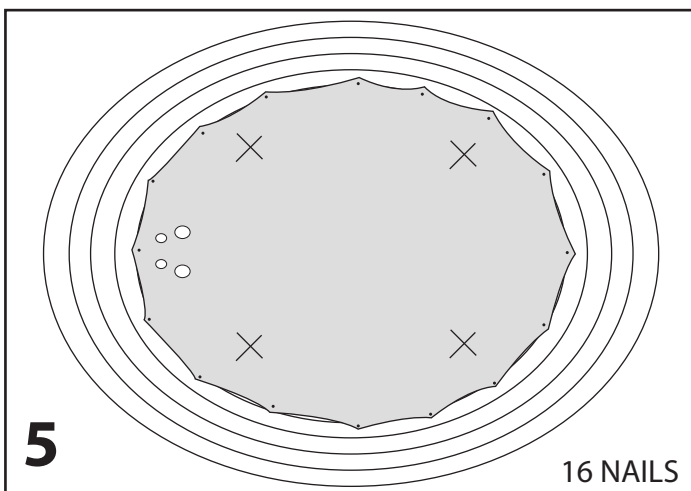

Begin with four nails. One at the nose, one at the tail, and one on each flank.

4

8 NAILS

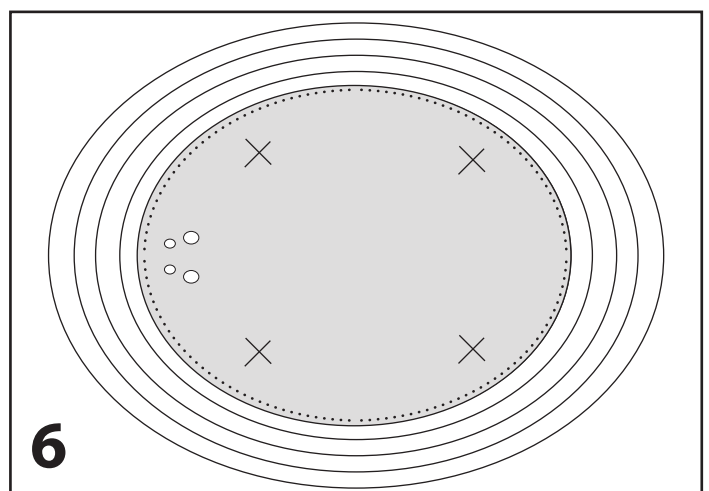

Add another four nails, one near each leg.

5

16 NAILS

Add nails in between the others. At this point, if you have difficulty stretching the pelt and securing the nails, you might want to consider dropping down half a size.

6

Finish nailing the rest of the pelt using at gap of one inch. It should be taut but not tight
